AKABA 40

Laino Cantilever

MATERIALS

Upholstered chair with or without armrests.
Structure Ø25 mm steel tube cantilever base with powder-coated finish.
Seat and backrest upholstered over a beech plywood core with multi-density foam. Backrest with flexible support.
Foam cusion with different densities, glued using eco-friendly waterborne adhesive.
Metallic finishes epoxy/polyester paint with a thickness of 50-90 microns depending on the colour, ISO 2409 Gt 0 adhesion and ASTM 2794 impact 2.5 joules reverse & direct or chrome finish, composition: 98.4% NI, 1.6% CR, 24.4 micron thickness and UNE EN ISO 2409-96 adhesion, Classification 0.
Glides in polypropylene.
Upholstery seat only, front upholstery or fully upholstered. See manufacturers' specifications for fabrics.

Akaba Quality

At Akaba, we understand manufacturing as an essential part of our commitment to responsible design and continuous improvement. All our products are developed under the ecodesign criteria defined by **ISO 14006**, integrating environmental considerations from the earliest stages of product conception and development to the end of its life cycle.

This approach allows us to move towards more efficient, durable, and easily recoverable solutions, prioritizing materials and processes that help reduce the environmental impact associated with our industrial activity.

Furthermore, Akaba has a certified management system in accordance with **ISO 9001** and **ISO 14001** standards, ensuring both the quality of our processes and products as well as environmental management focused on prevention, control, and continuous improvement of our environmental performance.

The combination of design, industry, and sustainability is part of our way of understanding furniture: products designed to generate wellbeing in spaces, with responsible manufacturing aligned with current environmental challenges.

Materials

Wood
Wood and derivatives sourced from **European** suppliers and controlled sources. FSC and PEFC certifications available upon request depending on material type. Renewable, reusable, and recyclable materials depending on composition. High durability and suitable for material recovery at the end of their life cycle.

Metals: steel and aluminium
Steel is the most recycled material in Europe, with rates above 80%. Aluminium typically incorporates between 30% and 40% recycled material and reaches recycling rates close to 95% at end-of-life. Both materials are **100% recyclable** without loss of properties.

Epoxy coatings
High-durability powder coatings. All coatings are lead-free and comply with **EcoVadis** certification requirements. They reduce maintenance and extend product lifespan. Suitable for recovery of the metal substrate during recycling processes after removal.

Polypropylenes
Recyclable thermoplastic material. Some product references are made from **100% recycled polypropylene**. Lightweight, resistant, and suitable for industrial injection processes. All versions are recyclable at the end of their life cycle.

Upholstery
Fabric selection meets aesthetic, functional, and environmental criteria. We collaborate with European suppliers operating under certified environmental management systems and prioritize fabrics with certifications such as EU Ecolabel. Our textile collections include recycled fibers, natural-origin materials, and treatments that are respectful of human health and the environment.

Foams
In upholstered products, we use flexible polyurethane and viscoelastic foams designed to ensure comfort, ergonomics, and durability. Many of these foams are **OEKO-TEX** certified, ensuring compliance with strict standards regarding harmful substances and user safety.

Worktops
Surfaces in melamine, HPL, compact phenolic, or wood. We work with **European suppliers** with certified European origin and, upon request, **FSC certification**. Materials with high mechanical and chemical resistance, with varying recyclability depending on composition, prioritizing long-life solutions.

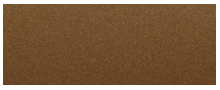
Packaging
Cardboard and recyclable packaging materials. Progressive incorporation of recycled materials, such as plastic bags made from **100% recycled plastic**. Volume optimization to reduce logistics impact. **100% recyclable** and easily separable materials for conventional waste streams.

Finishes

Metal finishes / Oxidized powder coats

Color / P-260: Anodic Bronze

Color / P-262: Oxyde Brown Textured



Color / P-261: Copper

Metal finishes / Powder coats (RAL: approximate references)
